CSCE476/876 **Spring 2004**

Homework 2: Learning Lisp with the Adaptive Remote Agent (II)

Assigned on: Wednesday January 28, 2004.

Due: Wednesday February 4, 2004

Quiz: Wednesday February 4, 2004.

As you can easily guess, this homework is the continuation of the previous one. The goal is that you learn Lisp by experimenting with the Adaptive Remote Agent available on the Web, courtesy of Professor Dr. Gerhard Weber:

`http://apsymac33.uni-trier.de:8080/elm-art/login-e`
`http://art2.ph-freiburg.de/Lisp-Course`

You are requested to login into the agent and run the *last three lessons* by Wednesday February 4, 2004. You will be graded as follows:

- (70 points) A quiz will be given in class with questions taken from the tutorial, randomly.
- (30 points) A short but substantive analysis in which you state what you learned from the web agent, how will you learned, what you found most helpful and what you found most difficult in your interactions with the agent. You need to be specific in your evaluation. Comments such as "a cool tool" are not be appropriate.

  You analysis should be submitted in electronic from using the `handin` system.

You are encouraged to work in groups of two on the remote agent. Your analysis should be written and submitted *individually*.
